## Even More Benefits

Improving on the revolutionary XC-RAM, the new **CT-Z®** enhances the riding experience by offering the benefit of a peak/shield combination.

CT-Z (Diamond White)

With a longstanding tradition of improving on what works, and not just change for the sake of change alone, the new **CT-Z** uses the XC-RAM model as its foundation, adding to its long list of coveted features and benefits based on rider input.

**The main focus of the new CT-Z was to provide a peak that works with the shield for riders who ride into the sun for extended periods of time.**

CT-Z (Black Frost)

**CT-Z** Upper vent system is the same as the XC-RAM.

Both hot air extraction & aerodynamic stability are excellent on the new **CT-Z**.

Fully removable, Dry-Cool®, liner in **CT-Z**.

New cheek pad design has a full coverage EPS base with noise absorbing foam for improved sound isolation, and removable covers for easier and more thorough cleaning.

**Micro fitting:** Surface pads can be removed from both sides of the head liner, as well as the top surface of both cheek pads, to achieve the best possible fit and minimize the need to purchase additional padding.

New **FCS™ (Facial Contour System)** Cheek Pads offer secure support over a larger area, and wrap under the jaw, providing superior stability and comfort with minimal pressure.

From the moment you slip into the CT-Z, with the latest **FCS™** cheek pad design, you will immediately recognize Arai's commitment to making better helmets.

# Foundational features of all Arai Helmets

Found in every Arai helmet is the basic and simple organic shell shape.

A helmet is first and foremost an **Energy Management System!** From ventilation to aerodynamics, shield systems, radio, blue tooth and graphics, everything else is secondary, and none should ever interfere with the helmet's number one job of **Impact Energy Management!**

Arai looks to the incredibly strong shape of an egg for inspiration, with the **smooth uninterrupted spherical shape transferring stress loads more evenly across its entire surface.**

The absence of exaggerated edges or protrusions on the shell is not a lack of creativity, but a commitment to maintaining the integrity of the shell with real world impact performance in mind, the kind a rider might encounter on the unpredictable streets where impacts are anything but controlled or predictable.

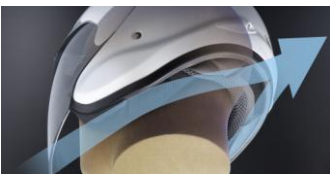

\*Sample liner for visual reference only.

- **Multi-Density (up to 5 in some models), Single-piece EPS liner provides exceptional impact energy management, while keeping the overall size and weight of the helmet to a minimum.**
- *\* A representative sample of the 5 different densities, used in our automotive helmet model, is shown here in a display liner. The actual densities and arrangement of those densities depend on the helmet model and size, the details of which are proprietary.*

## Additional features of the new CT-Z® SERIES

- **Fixed Air-Wing® on the CT-Z reduces lifting while providing additional stability at highway speeds.**
- **DF-11 Diffusers have larger vent toggles for easier operation.**

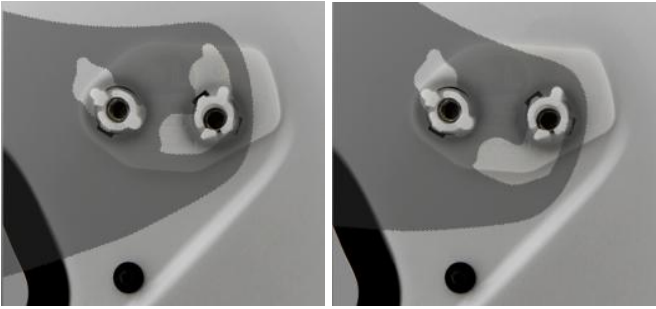

- **Vented neck roll takes advantage of existing airflow from around the rider's neck to further enhance helmet ventilation by extracting more heat build up from the interior.**

- **Adjustable peak offers just the right amount of protection from the sun for just about any rider for those long rides heading directly into the sun.**

# Additional features of the new CT-Z® SERIES

- **Dual Pivot shield mechanism** allows the shield to flip up and back so as to tuck neatly under the peak at a very low height.
- This allows for a very low peak profile, reducing drag or “bucketing” at higher street legal speeds.

- **Smooth, strong, flexible shell** combined with a one piece, multi-density EPS liner gives the CT-Z the same impact energy management performance you would expect from every Arai helmet.
