XC® SERIES

XC® / XC-RAM®

Extended Coverage never felt so good.

Offering more facial coverage, while still providing that open feeling, in what many consider to be the ultimate open face helmet Series.

XC-RAM

With a long standing tradition of improving on what works, not just simply change for the sake of change, the new **XC Series** has a lot in common with the previous Classic & SZ models, with our focus on improvements that provide the rider with tangible benefits.

The main focus of the new XC Series was extended coverage, with the shell on both sides coming forward in the cheek pad area by 3cm (1-3/16").

XC

XC-RAM Upper vent system borrows directly from the CV,

Improving airflow and helmet stability even further.

Fully removable Dry-Cool® liner in **XC-RAM**.

New cheek pad design is more similar to the full face style; with a full coverage EPS base & removable covers.

From the moment you slip into the XC or XC-RAM you will immediately recognize the Arai commitment to making a better helmet.

Front TDF-2 intake vents on the **XC** are a direct take off from the RX-Q.

The rear DDL-4 exhaust vent on the **XC** is also taken directly from the RX-Q.

Side cowls exhausts complete the ventilation upgrade.

Foundational feature of all Arai Helmets

Found in every Arai helmet is the basic and simple organic shell shape.

A helmet is first and foremost an **Energy Management System!** From ventilation to aerodynamics, shield systems, radio, blue tooth and graphics; everything comes secondary and none should ever interfere with the helmets number one job of **Impact Energy Management!**

Arai looks to the incredibly strong shape of an egg for inspiration, with the **smooth uninterrupted spherical shape transferring stress loads more evenly across its entire surface.**

The absence of exaggerated edges or protrusions in the shell is not a lack of creativity, but a commitment to maintaining the integrity of the shell with real world impact performance in mind, the kind a rider might encounter on the unpredictable streets where impacts are anything but controlled or predictable.

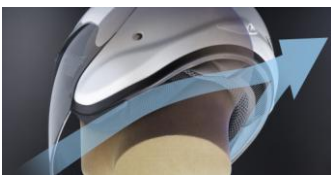

*Sample liner for visual reference only.

- **Multi-Density (up to 5 in some models), Single piece EPS liner provides exceptional impact energy management, while keeping the overall size and weight of the helmet to a minimum.**
- **A representative sample of the 5 different densities is shown here in a display liner. Actual arrangement of the various densities depends on the helmet model and size, the details of which are proprietary.**

Additional features of the new XC® SERIES

- **Fixed Air-Wing® on the XC-RAM reduces lifting while providing additional stability at highway speeds.**
- **DF-11 Diffusers have larger vent toggles for easier operation.**

- **Vented neck roll on both models takes advantage of existing airflow from around the rider's neck to further enhance helmet ventilation by extracting more heat build up from the interior.**

- **Thinner shield arms (pods) provide a more aerodynamic shape on both models.**
- **LRS levers assist with shield removal on both models.**
