

A Classic Returns

Another classic design finds its way back, in this case the Sakata Bomb (shortened to just BOMB in this incarnation) proving that some designs are truly timeless.

The bold colors and simple lines combined with a clever pictogram on the back and whimsical "hopping mad" cartoon bomb sets this design apart. Offered on the Long Oval Signet-Q, which has quickly become our #1 selling model in North America, more people than ever will be able to choose this cool design and enjoy it in incredible comfort.

Key features of the Signet-Q:

- FCS cheek pads providing excellent stability at speed, while also offering incredible comfort for all day riding.
- Dry-Cool interior material for improved comfort - drawing heat and moisture away from you and letting the air flow.
- Peel Away cheek and temple pad layers for additional micro fitting, allowing you custom for your unique head shape.
- MAX-V Brow-vent Pin lock shield, offers ability to change inner anti-fog lens tints using the same shield, with an incredible field of view.

SIGNET-Q Bomb

Rounder, Smoother & Stronger Shell
